Responses to listserve query regarding Assessment Systems

We use Tk20. It is hosted "off-site" but we paid for the server. Please see the contact listed below. Overall, we are satisfied with the product. We just recently implemented it so the problems have mostly been on our end.

Task Stream - it is cloud based

https://www1.taskstream.com/solutions/institutional-effectiveness/

It is called WEAVE.

http://www.weaveonline.com/what-is-weave-online/

I find it a bit cumbersome but it has some good aspects to it too, such as how you can use your findings into some sort of a feedback loop or rationale for hiring, for example.

For field, we use a program called IPT. It is relatively cheap and works well. *(for field only)*

The Intern Placement Tracking (IPT) was developed by Orem, Utah-based Alcea Software. The web-based system was developed in close association with the Brigham Young University School of Social Work. BYU has been effectively using IPT for the last seven years in managing their BSW and MSW Field Placement Programs.

We contract with an educational assessment group at UCLA to handle learning assessments measures, data collection and analysis for our MSW program. *(this may be available only to California system schools – I couldn't find anything open to the public on the UCLA site)*
